

RESEARCH IS MORE THAN FINDING THE RIGHT ANSWERS.
IT'S ASKING THE RIGHT QUESTIONS.

Research teaches us to slow down, listen closely and explore every angle. Faculty, staff and students at Kansas State University learn together to ask the right questions, test our ideas and use our new knowledge to improve our world.

Our perseverance and insatiable love of knowledge — along with nationally ranked programs and 90-plus research centers — are helping us explore vaccines to prevent infectious diseases, robotic farming, grassland ecology, new wheat varieties, microbial life in lava caves, rural history, Kansas accents, astronaut health and much more.
