

KU bachelor's degree options

Jobs in health care available now!

Students enter the programs below after two years of prerequisite course work. Following two years of study at KU Medical Center, these KU graduates are in very high demand with exceptional job-placement rates.

Clinical Laboratory Science: These professionals use sophisticated instruments to analyze blood and other body tissues to provide the essential information needed for medical diagnoses and to plan treatment.

Health Information Management: Essential to today's health care system, graduates go on to analyze, manage and secure patient information in a field combining science, business, law, and information systems with clinical knowledge.

Respiratory Care: These clinicians are vital in the evaluation and treatment of patients with breathing disorders. They work in dynamic environments such as adult and pediatric intensive care units, clinical practice, rehabilitation, and more.
